

Carrier Customer Bulletin

Date of Bulletin: July 12, 2021
Notice #: CCBFTR01935
Audience: CLEC, Reseller
Subject: DSL Loop Qualification for Wholesale Broadband (TXTYP-X)
Response Enhancements
Date Effective: 07/25/2021

Frontier is providing notification of an enhancement to the DSL Loop Qualification for Wholesale Broadband (TXTYP-X) pre-order response. The enhancement will improve Wholesale Broadband serviceability inquiries by returning all available broadband provisioning speeds for the requested address or working telephone number.

Effective July 25, 2021, the existing Multi-text (MLT) field on the DSL Loop Qualification for Wholesale Broadband (TXTYP-X) pre-order response will show available speeds under the tag 'AVLSP' (Available Speed). Multiple occurrences of the MLT section with the AVLSP tag may be returned.

Currently, Frontier provides only the highest available speed, for the requested address or working telephone number, in the Loop Speeds Available (LSA) field of the DSL Loop Qualification for Wholesale Broadband (TXTYP-X) pre-order response. This enhancement eliminates assumptions that all broadband speeds, lesser than highest speed available, are available for provisioning.

No changes will be made to the inquiry portion of the DSL Loop Qualification for Wholesale Broadband (TXTYP-X) pre-order transaction and submissions shall continue to be accepted as current process dictates via bonded, VFO-GUI, or Bulk Loader methods.
